Claims

1. A device for pivoting a vehicle door or a vehicle lid, which is connected in a rotationally fixed manner to a hinge bracket (1), about a hinge pin (3), having the following features:

- a) the device (5) comprises a drive (6) and a drive shaft (7) which is connected to the drive (6) and extends in the direction of the hinge pin (3);
- b) the drive shaft (7) is connected in a rotationally fixed manner to the first end (8) of a bracket-like drive lever (9) arranged essentially parallel to the hinge bracket (1);
- c) the second end (10) of the bracket-like drive lever (9) can be connected to the hinge bracket (1).

2. The device as claimed in Claim 1, characterized in that the drive shaft (7) is connected in a force-fitting and/or form-fitting manner to the drive lever (9).

3. The device as claimed in Claim 1 or 2, characterized in that, on its side which is directed away from the drive shaft (7), the drive lever (9) has a bearing bushing (11) which can be plugged on to a bearing journal (12) provided at the end of the hinge pin (3).

4. The device as claimed in one of Claims 1 to 3, characterized in that the drive lever (9) and the hinge bracket (1) can be fastened to one another in a releasable manner.

5. The device as claimed in one of Claims 1 to 3, characterized in that the drive lever (9) can be
